Office Action Summary

Art Unit:

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Admitted Prior Art (APA) in view of Bowden, Jr. (4,379,607).

The APA socket for an electrical connector comprising a cavity for allowing a plug to be inserted therein as discussed in the background and shown in figures 17-18 of the present invention. It is noted that the APA utilizes hinged doors instead of shutter biased by an elastic member for blocking a through hole of the socket.

Bowden, Jr. discloses a shutter mechanism 108 for blocking a through hole of a socket 50 and being released from the blocked state by insertion of the plug 72.

Therefore, it would have been obvious for one of ordinary skilled in the art to provide a shutter biased by an elastic member for blocking the through hole of the APA socket in view of the teachings of Bowden, Jr. The use of spring biased shutter means is old and well known in the art which seem to require less interior space for operation than the hinged shutter doors of the

prior art. Regarding the various arrangements of such shutter in relation to the socket housing is deemed obvious location of part and socket design.
